

Have been added more KS4+ and IGCSE material and continued to update and improve existing files.

One of an infinite number of spirals that one can produce with a spiral generator. Attempting to do things with Excel that I used LOGO for years ago.

A recent open ended lesson starter that allows use of integers, decimals, fractions and percentages in any cell and checks to see if solution is in simplest form. Example only to show form of fraction which can have up to three digits in numerator or denominator.
