

# Living Worksheets for Mathematics

Living Worksheets® provide a comprehensive range of interactive mathematical exercises, puzzles, problems, lesson starters and tools, suited for use with interactive whiteboards, stand-alone or networked computers and internet use

Over **5000** interactive applications now cover most of the taught Mathematics Curriculum in the primary and secondary sectors. Used with enthusiasm and success in the full range of educational situations to be found throughout the UK and beyond. The material is simple, motivating, accessible and effective, suiting students with a wide range of ages and abilities. The instant feedback that is provided both motivates and allows students to progress with confidence.

The website, [www.livingworksheets.co.uk](http://www.livingworksheets.co.uk) provides further information, sample downloads and teacher comment.

Written and produced in its entirety by an experienced maths teacher.

A sample of comments and feedback received from teachers.

SLW4S3. 'Living Worksheets' is a great asset to our maths department. We use it with all ages and abilities. It is the best maths software that we have bought and offers plenty of practice for students in a wide variety of topics. Rebecca Redding, Head of Mathematics, Thomas Alleyne's High School, Staffordshire.

MLW4S2P(US). As a math intervention teacher in a high need New York City public school I have found nothing that approaches the effectiveness of Living Worksheets. The sheets are instructive, extremely logical, and enjoyable to use. The immediate feedback builds confidence and motivates the student to go further and to move their learning on to the next level. This has truly been an invaluable tool in my work - simple in design, yet so powerful in what it can do. Tim Glass, New York.

SLW4S3. Living Worksheets enable individual learning plans to be implemented in very diverse groups. As they are self-marking, and give very positive re-inforcing feedback, pupil's errors can be eliminated before they become habituated. We are a Special School for physically disabled students that range in ability from Level 1 to A\* GCSE and beyond. This is the most useful resource in my department. Chris Hughes, Advanced Skills Teacher, Maths and Science Co-ordinator, Blackfriars School.

SLW4S3. Living Worksheets are great for differentiation within a group as a variety of worksheets can be set in one lesson and students can pick the relevant ones according to their needs. Dr Julie Dekanski, Head of Mathematics, Ashville College, North Yorkshire.
